# Joins, Subqueries, CTEs

**SoftUni Team Technical Trainers** 

https://softuni.bg

### Questions

### **Table of Contents**

- 1. Joins
- 2. Subqueries
- 3. Common Table Expressions (CTE)
- 4. Temporary Tables

### **Data from Multiple Tables**

Sometimes you need data from several tables

7,000
DepartmentID
3
NULL

**Employees** 

#### Departments

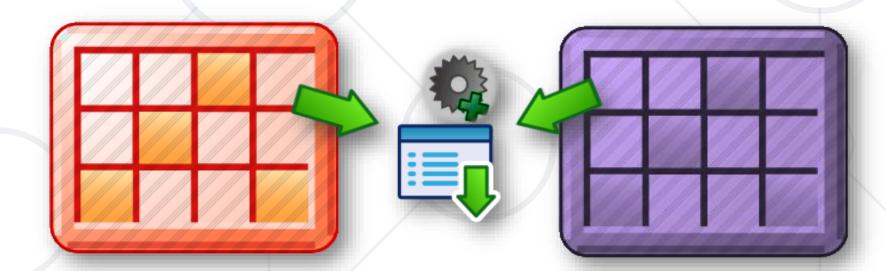

DepartmentID	<b>DepartmentName</b>
3	Sales
4	Marketing
5	Purchasing

<b>EmployeeNa</b>	me	DepartmentID	<b>DepartmentName</b>	
Edward		3	Sales	

# **Types of Joins**

- Inner joins
- Left, right and full outer joins
- Cross joins

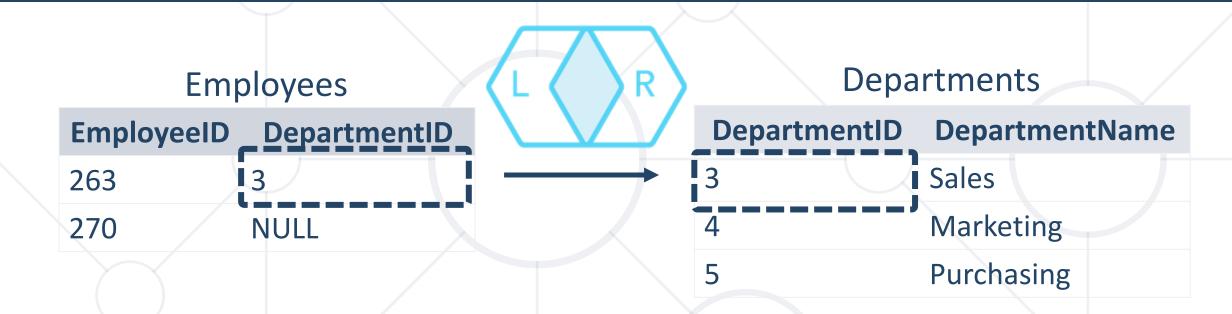

#### **INNER vs. OUTER Joins**

- Inner join
  - Join of two tables returning only rows matching the join condition
- Left (or right) outer join
  - Returns the results of the inner join as well as unmatched rows from the left (or right) table
- Full outer join
  - Returns the results of an inner join along with all unmatched rows

### **Inner Join**

#### Result

<b>EmployeeID</b>	DepartmentID	DepartmentID	DepartmentName
263	3	3	Sales

### **Inner Join Syntax**

SELECT \* FROM Employees AS e
INNER JOIN Departments AS d
ON e.DepartmentID = d.DepartmentID

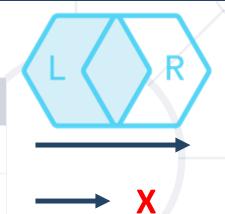

Join Condition

### **Left Outer Join**

**Employees** 

EmployeeID	DepartmentID
263	3
270	NULL

**Departments** 

Department	ID DepartmentName
3	Sales
4	Marketing
5	Purchasing

Result

EmployeeID	DepartmentID	DepartmentID	DepartmentName
263	3	3	Sales
270	NULL	NULL	NULL

### **Left Outer Join Syntax**

```
SELECT * FROM Employees AS e Table Departments

LEFT OUTER JOIN Departments AS d

ON e.DepartmentID = d.DepartmentID

Join Condition
```

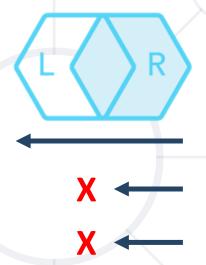

11

# **Right Outer Join**

**Employees** 

<b>EmployeeID</b>	DepartmentID
263	3
270	NULL

**Departments** 

DepartmentID		DepartmentName
3		Sales
4		Marketing
5		Purchasing

Result

Employeel	<b>DepartmentID</b>	DepartmentID	DepartmentName
263	3	3	Sales
NULL	NULL	4	Marketing
NULL	NULL	5	Purchasing

### **Right Outer Join Syntax**

SELECT \* FROM Employees AS e Departments Table
RIGHT OUTER JOIN Departments AS d
ON e.DepartmentID = d.DepartmentID

Join Condition

# **Full Join**

Em	ployees		Depa	artments
EmployeeID	DepartmentID		DepartmentID	DepartmentName
263	3	<b>←</b>	3	Sales
270	NULL	<b>→ X</b> ←	4	Marketing
		<b>X</b> ←	5	Purchasing

	١.
Resu	lt
ハてろい	IJ

EmployeeID	DepartmentID	DepartmentID	DepartmentName
263	3	3	Sales
270	NULL	NULL	NULL
NULL	NULL	4	Marketing
NULL	NULL	5	Purchasing

### **Full Join Syntax**

```
SELECT * FROM Employees AS e
FULL JOIN Departments AS d

ON e.DepartmentID = d.DepartmentID

Join Condition
```

### **Cartesian Product**

This will produce a <u>Cartesian product</u>:

SELECT LastName, Name AS
DepartmentName
FROM Employees, Departments

■ The result:

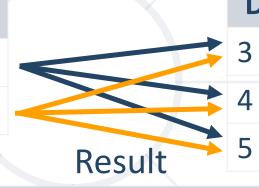

LastName	DepartmentName	
Gilbert	Engineering	
Brown	Engineering	
Gilbert	Sales	
Brown	Sales	

### **Cross Join**

**Employees** 

<b>EmployeeID</b>	DepartmentID
263	3
270	NULL

#### Departments

DepartmentID	DepartmentName
3	Sales
4	Marketing
5	Purchasing

Emplo	oyeeID	Departmen	tID [	epartmentID	DepartmentName
263		3	3		Sales
263		3	4		Marketing
263		3	5		Purchasing
270		NULL	3		Sales
270		NULL	4		Marketing
270		NULL	5		Purchasing

### **Cross Join Syntax**

SELECT \* FROM Employees AS e

CROSS JOIN Departments AS d

Departments Table

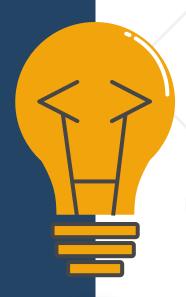

**No Join Conditions** 

Sally	13
John	10
Michael	22
Bob	11
Robin	7
Jessica	15

18	Accounting
10	Marketing
12	ĤR
22	Engineering
8	Sales
7	Executive

Inner Join

	18	Accounting

Sally 13
John 10

Michael 22

Bob	11
Robin	7
Jessica	15

Marketing

10

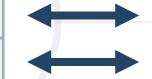

L R

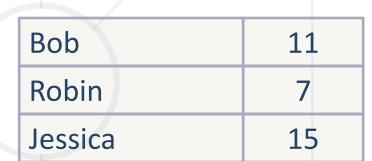

Left Outer Join

Sally	13
John	10

18	Accounting	
NULL	NULL	
10	Marketing	
12	HR	
22	Engineering	
8	Sales	
NULL	NULL	
7	Executive	
NULL	NULL	

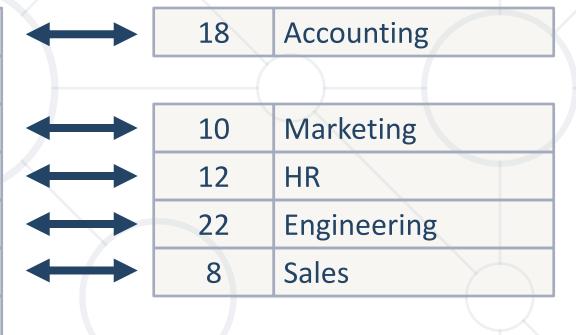

Right Outer Join

NULL	NULL
Sally	13
John	10
NULL	NULL
Michael	22
NULL	NULL
Bob	11
Robin	7
Jessica	15

Executive

#### Full Outer Join

NULL	NULL	
Sally	13	
John	10	
NULL	NULL	
Michael	22	
NULL	NULL	
Bob	11	
Robin	7	
Jessica	15	

#### **Problem: Addresses with Towns**

- Display address information of all employees in "SoftUni" database. Select first 50 employees
  - The exact format of data is shown below
  - Order them by FirstName, then by LastName (ascending)
    - Hint: Use three-way join

	FirstName	LastName	Town	AddressText
1	A. Scott	Wright	Newport Hills	1400 Gate Drive
2	Alan	Brewer	Kenmore	8192 Seagull Court
3	Alejandro	McGuel	Seattle	7842 Ygnacio Valley Road
4	Alex	Nayberg	Newport Hills	4350 Minute Dr.

Check your solution here: <a href="https://judge.softuni.org/Contests/Compete/Index/393#0">https://judge.softuni.org/Contests/Compete/Index/393#0</a>

#### **Solution: Addresses with Towns**

```
SELECT TOP 50 e.FirstName, e.LastName,
  t.Name as Town, a.AddressText
FROM Employees e
  JOIN Addresses a ON e.AddressID = a.AddressID
  JOIN Towns t ON a.TownID = t.TownID
ORDER BY e.FirstName, e.LastName
```

Check your solution here: <a href="https://judge.softuni.org/Contests/Compete/Index/393#0">https://judge.softuni.org/Contests/Compete/Index/393#0</a>

### **Problem: Sales Employees**

- Find all employees that are in the "Sales" department. Use "SoftUni" database.
  - Follow the specified format:

	EmployeeID	FirstName	LastName	DepartmentName
1	268	Stephen	Jiang	Sales
2	273	Brian	Welcker	Sales
3	275	Michael	Blythe	Sales
4	276	Linda	Mitchell	Sales
5	277	Jillian	Carson	Sales

Order them by EmployeeID

### **Solution: Sales Employees**

```
SELECT e.EmployeeID, e.FirstName, e.LastName,
  d.Name AS DepartmentName
FROM Employees e
                                Departments Table
 INNER JOIN Departments d
    ON e.DepartmentID = d.DepartmentID
WHERE d.Name = 'Sales'
ORDER BY e. EmployeeID
```

Check your solution here: <a href="https://judge.softuni.org/Contests/Practice/Index/393#2">https://judge.softuni.org/Contests/Practice/Index/393#2</a>

### **Problem: Employees Hired After**

- Show all employees that:
  - Are hired after 1/1/1999
  - Are either in "Sales" or "Finance" department

	FirstName	LastName	HireDate	DeptName
1	Deborah	Poe	2001-01-19 00:00:00	Finance
2	Wendy	Kahn	2001-01-26 00:00:00	Finance
3	Candy	Spoon	2001-02-07 00:00:00	Finance
4	David	Barber	2001-02-13 00:00:00	Finance

Sorted by HireDate (ascending)

Check your solution here: <a href="https://judge.softuni.org/Contests/Practice/Index/393#5">https://judge.softuni.org/Contests/Practice/Index/393#5</a>

### **Solution: Employees Hired After**

```
SELECT e.FirstName, e.LastName, e.HireDate,
  d.Name as DeptName
FROM Employees e
 INNER JOIN Departments d
  ON (e.DepartmentId = d.DepartmentId
 AND e.HireDate > '1/1/1999'
 AND d.Name IN ('Sales', 'Finance'))
ORDER BY e.HireDate ASC
```

Check your solution here: <a href="https://judge.softuni.org/Contests/Practice/Index/393#5">https://judge.softuni.org/Contests/Practice/Index/393#5</a>

### **Problem: Employee Summary**

- Display information about employee's manager and employee's department
  - Show only the first 50 employees
  - The exact format is shown below:

	EmployeeID	EmployeeName	ManagerName	DepartmentName
1	1	Guy Gilbert	Jo Brown	Production
2	2	Kevin Brown	David Bradley	Marketing
3	3	Roberto Tamburello	Terri Duffy	Engineering
4	4	Rob Walters	Roberto Tamburello	Tool Design
5	5	Thierry D'Hers	Ovidiu Cracium	Tool Design

Sort by EmployeeID (ascending)

Check your solution here: <a href="https://judge.softuni.org/Contests/Practice/Index/393#9">https://judge.softuni.org/Contests/Practice/Index/393#9</a>

### **Solution: Employee Summary**

```
SELECT TOP 50
                            Cross Table Selection
  e.EmployeeID,
  e.FirstName + ' ' + e.LastName AS EmployeeName,
  m.FirstName + ' ' + m. LastName AS ManagerName,
  d.Name AS DepartmentName
                                              Self-join
FROM Employees AS e
 LEFT JOIN Employees AS m ON m.EmployeeID =
e.ManagerID
  LEFT JOIN Departments AS d ON d.DepartmentID =
    e.DepartmentID
                                Table Departments
  ORDER BY e. EmployeeID ASC
```

Query Manipulation On Multiple Levels

## Subqueries

Use a query's result as data for another query

#### **Employees**

Query
-------

Em	ployeeID	Sala	ry
59	1	19,000	
71		13,300	
•••		••	

WHERE DepartmentID IN

DepartmentID	Name	
10	Finance	

### **Subquery Syntax**

```
SELECT FROM Employees AS e
WHERE e.DepartmentID IN
   SELECT d.DepartmentID
                            Table Depatments
     FROM Deparments AS d
    WHERE d.Name = 'Finance'
         Subquery
```

### **Problem: Min Average Salary**

- Display lowest average salary of all departments.
  - Calculate average salary for each department.
  - Then show the value of smallest one.

	MinAverageSalary
1	10866.6666

Check your solution here: <a href="https://judge.softuni.org/Contests/Practice/Index/393#10">https://judge.softuni.org/Contests/Practice/Index/393#10</a>

### **Solution: Min Average Salary**

```
SELECT
      MIN(a.AverageSalary) AS MinAverageSalary
       FROM
          SELECT e.DepartmentID,
Subquery
                 AVG(e.Salary) AS AverageSalary
            FROM Employees AS e
                                     Table Employees
        GROUP BY e.DepartmentID
```

# **Common Table Expressions**

Reusable Subqueries

### **Common Table Expressions**

- Common Table Expressions (CTE) can be considered as "named subqueries"
- They could be used to improve code readability and code reuse
- Usually, they are positioned in the beginning of the query

```
WITH CTE_Name (ColumnA, ColumnB...)
AS
(
-- Insert subquery here.
)
```

# **Common Table Expressions Syntax**

FROM Employees CTE

```
WITH Employees CTE
  (FirstName, LastName, DepartmentName)
AS
  SELECT e.FirstName, e.LastName, d.Name
  FROM Employees AS e
  LEFT JOIN Departments AS d ON
    d.DepartmentID = e.DepartmentID
SELECT FirstName, LastName, DepartmentName
```

# **Temporary Tables**

- Temporary tables are stored in tempdb
- Automatically deleted when they are no longer used

```
CREATE TABLE #TempTable
(
-- Add columns here.
)

SELECT * FROM #TempTable
```

# **Temporary Table Syntax**

```
Id INT PRIMARY KEY,
     FirstName VARCHAR(50) NOT NULL,
    LastName VARCHAR(50),
    Address VARCHAR(50)
SELECT * FROM #Employees
```

CREATE TABLE #Employees

# Types of Temporary Tables

- Table variables (DECLARE @t TABLE)
  - Visible only to the connection that creates it
- Local temporary tables (CREATE TABLE #t)
  - Visible only to the connection that creates it
- Global temporary tables (CREATE TABLE ##t)
  - Visible to everyone
  - Deleted when all connections that have referenced them, have closed
- Tempdb permanent tables (USE tempdb CREATE TABLE t)
  - Visible to everyone. Deleted when the server is restarted

#### Summary

Joins

SELECT \* FROM Employees AS e
 JOIN Departments AS d ON
d.DepartmentId = e.DepartmentID

- Subqueries are used to nest queries
- CTE's improve code reuse and readability
- Indices improve SQL search performance if used properly
